Projects

Hotel Room Booking
153 Days

HotelRoomBooking project: HotelBook is a cutting-edge room reservation system designed to streamline hotel bookings for both customers and administrators. The web application allows users to search and book hotel rooms effortlessly, with features like real-time availability checking, secure payment processing, and personalized booking management. The admin panel enables hotel staff to efficiently manage room inventory, rates, and bookings, as well as generate reports and analytics to optimize their business. Built with a user-friendly interface and robust backend architecture, HotelBook aims to revolutionize the hotel reservation experience, making it more convenient, efficient, and enjoyable for all stakeholders.

Medical Billing
2 Weeks

Enhanced the system with notification features for customer appointments.

My Role: I was responsible for implementing a notification system that alerted patients about upcoming appointments, ensuring better adherence to scheduled visits and reducing no-shows.

College project
4 Weeks

Developed a manageable gallery section for the college website.

My Role: I integrated the gallery feature,

enabling administrators to upload, edit, and organize images and videos seamlessly. The intuitive interface facilitated easy content management and enriched user experience.

Clint Enquiry

4 Weeks

Managed backend and developed full admin panel for research enquiries.

My Role: I'm responsible for the development of backend services, including subscription management, contact form processing, and data retrieval for admin dashboard presentation.

Taxi booking

4 Weeks

Developed backend service for a taxi booking application.

My Role: I architected the backend infrastructure, designing APIs for booking requests, driver assignments, and fare calculations. The scalable backend supported real-time updates and ensured a reliable booking experience.
